

## NEW CENTURY, NEW CONCEPTS IN BIOTECHNOLOGY

***Pettegrew Homestead Farms Research, Inc, PHFR*** has researched and developed issued patents that can lead to further product development. We are not just researchers, we are also product innovators!

**PHFR** has developed a formula we call Active, derived from green technology. The process in which the formula is produced is patented. The formula contains molecules that can help repair cells and tissues.

Our team is comprised of talented engineers, MD's, technical gurus, healthcare professionals, and importantly, scientists, all with hands-on experience in multiple dynamic fields. Our Active was created and patented to help a wide variety of skin and tissue repair such as:

- Facial and eye cream
- Body lotion
- Hand cream
- Bar soap
- Shampoo
- Toothpaste

We believe it is vitally important to treat more fundamental molecular and cellular causes of symptoms with the goal of preventing further progression of tissue degeneration. To that end, PHFR, Inc. is targeting treatments to stimulate skin cell membranes, which can enhance cell and tissue repair.

Our Active formula is available for distribution, via license agreements, to be added to consumer, agricultural, and medical products. For more information on our work and partnering opportunities, please contact us.

Our partners encompass globally respected names in biotechnology, design and quality. They trust us to deliver the best, most efficient, technically advanced and cost-effective solutions for their customers and themselves.

To find products with our Active, look for the logo on the packaging.
